

# ECONOMY CYCLE

Rooftop Packaged Air Conditioners with Economy Cycle

# Dunnair

## Quality Engineering Solutions

Dunnair is now firmly positioned as a leading supplier to the air conditioning industry.

The name Dunnair is synonymous with high quality products in the commercial air-conditioning industry. Beginning with Dunn Air Conditioning in 1961 and more recently, Dunnair International and Dunnair Australia, the company continues to be a leading importer and supplier of air-conditioning brands for the Australian market.

In 1994, the company was bought by Multistack and renamed Dunnair International. In 2004, Ernest Ugazio acquired the sales and subsequently state service department of Dunnair. This led to the company being divided into separate entities: Dunnair International and Dunnair Australia, the former focused on Multistack Chiller sales and spare parts; while the latter began design and development of a split ducted and rooftop packaged range that was manufactured in China.

The **Economy cycle rooftop packaged and split ducted units** shown in this brochure are part of Dunnair's range of high quality units for every application. Dunnair has also become the first choice when individual engineering solutions are required. Fast-moving and responsive, Dunnair supplies made-to-measure HVAC solutions to a growing number of high profile developments across Australia.

Dunnair research and development plus a strict quality control program have been fundamental to our growth, success and reputation. Dunnair units are manufactured in accordance with strict quality control standards and are MEPS rated and developed for Australian conditions.

**Range:** Dunnair's two modern factories manufacture 16 separate product lines and some 600 different models. Dunnair can supply most products the HVAC industry requires. This new product line of economy cycle is proof that the company is working continuously to improve its product range and the efficiency of its products.

**Specialised Solutions:** Dunnair will engineer and manufacture equipment to suit the application and building design. No challenge will go unaccepted. We will design and make special products as required for the building, mining, transport and maritime industry. We employ mechanical engineers in all sales offices in Australia. Their role is to supporting designers to achieve their goals.

Our promise to the system designers is: **"Tell us what you need and we will work with you to deliver"**.

With a head office in Melbourne, Dunnair has offices in New South Wales, Queensland, South Australia, Western Australia and Tasmania. Dunnair maintains a dedicated engineering and sales support staff waiting to assist you with technical and product information and provide valuable solutions for your project.

**Dunnair will design, build and deliver HVAC equipment to meet the most stringent specifications and difficult applications.**

# Economy Cycle

## Rooftop Packaged Air Conditioners

Economy cycle systems are compulsory on larger commercial buildings depending on size and geographical location within Australia.

Traditionally, economy cycle systems were designed as a part of rooftop ductwork. This was an expensive and time consuming practice.

For over 50 years Dunnair has been a leading innovator of new products and systems in the HVAC industry. The concept of the economy cycle system is not new but it took Dunnair's ingenuity to incorporate this function into one unit. This new range of rooftop packaged air conditioners has been operating in a considerable number of buildings across Australia since 2009. These units have made life much easier for building designers, consultants, builders, air conditioning contractors, electricians and most importantly, end users.

The obvious benefits are cost savings in both labour and materials. For example, the pairing of the Dunnair Economy Cycle range with the viking module thermostat makes electrical wiring less complicated thereby reducing control installation costs.

The Dunnair Economy Cycle Rooftop Packaged range enables a better air conditioning system on all fronts with more fresh air, reduced running costs, less service and maintenance and a much more user friendly control interface.

The importance and benefits of installing a self contained Dunnair economy cycle rooftop packaged air conditioner is self-evident when considering what this can deliver:

- More fresh air to the conditioned space providing a healthier environment.
- In ideal conditions a saving of up to 70% on running costs.
- Increased rates due to the carbon tax will be partially offset by using the economy cycle function.
- The ability to vary the amount of fresh air from 10% to 100% to achieve maximum benefit from the system.
- Initial investment will be offset by reduced energy bills over the long term. \*

Dunnair economy cycle rooftop packaged air conditioners are also designed in split ducted type. There are 47 models in total available in both rooftop packaged and split ducted type. The capacity range starting from 6kW through to 200kW will satisfy almost any system requirement.

Dunnair recommends the economy cycle air conditioner for both domestic and commercial applications in all parts of south and south eastern Australia where in spring and autumn the internal temperature of a building can be maintained with a high proportion of fresh air.

\* Statement is made based on typical application of Dunnair Economy Cycle air conditioner.

**Split Ducted Systems available  
upon request**

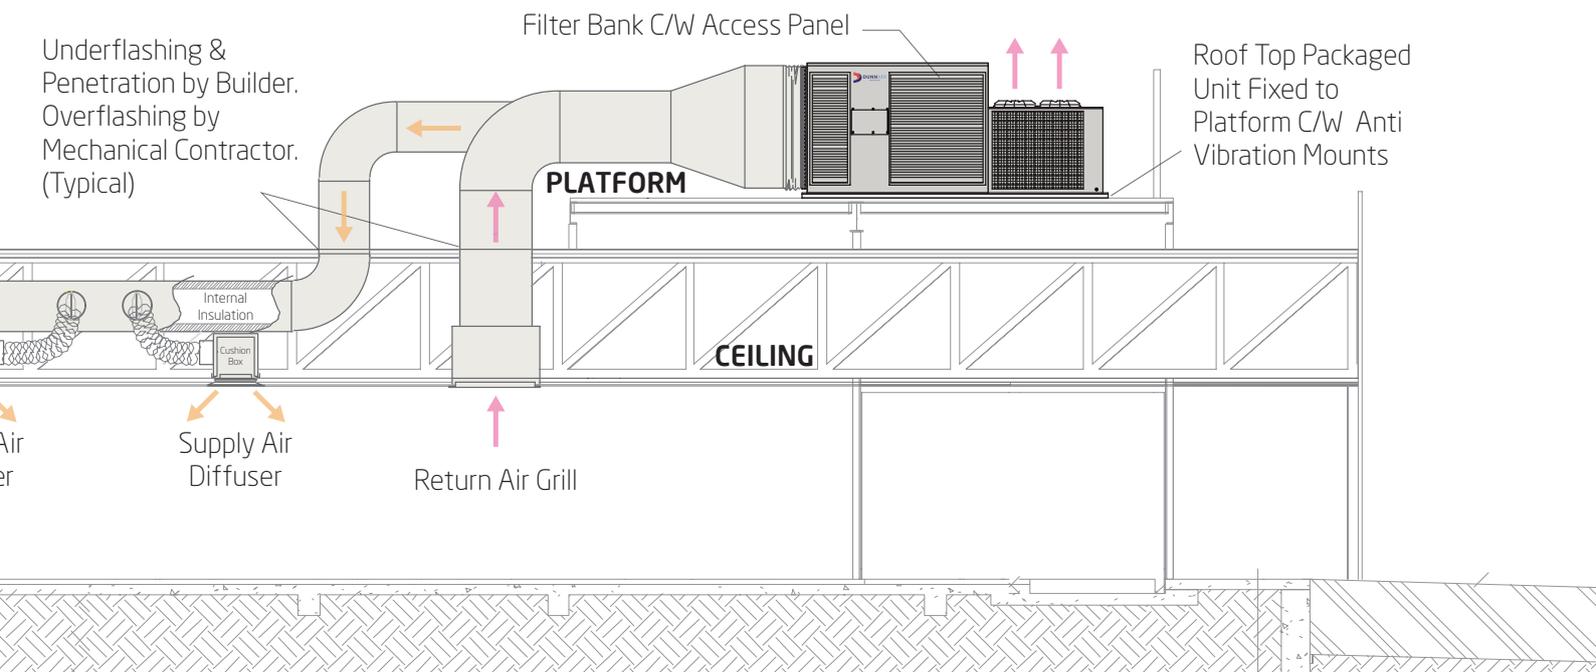

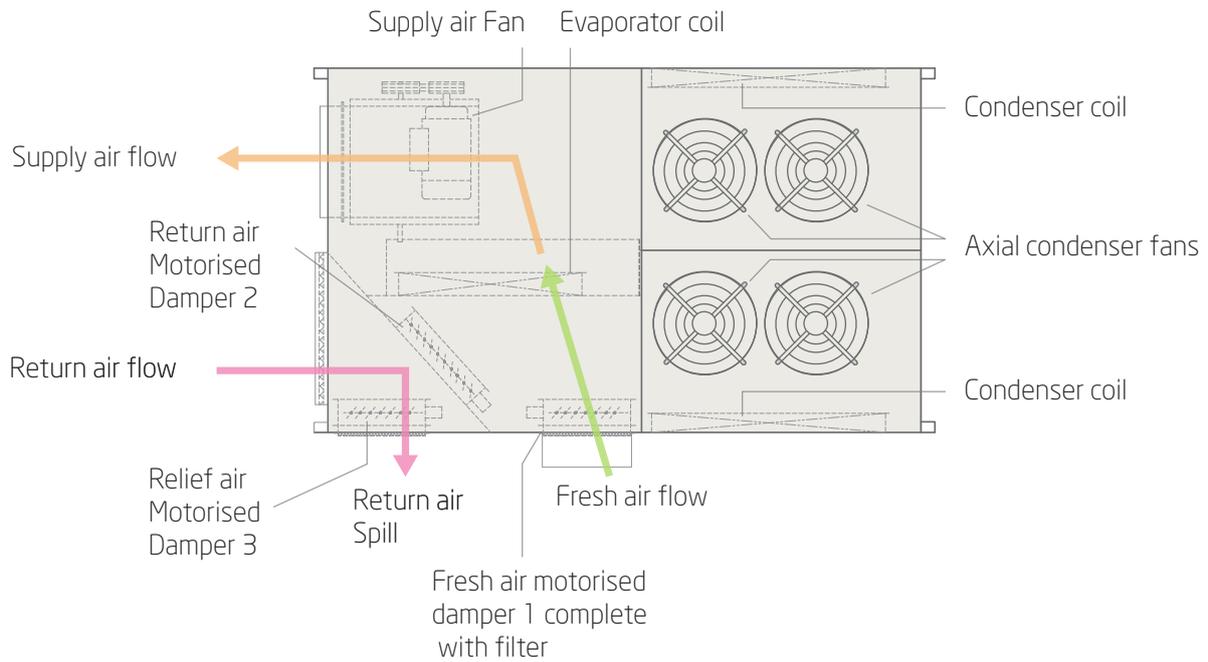

**Economy Cycle Mode 1**

Fresh air motorised damper 1 Open  
Return air motorised damper 2 Closed  
Relief air motorised damper 3 Closed

**Economy Cycle Mode 2**

Fresh air motorised damper 1 Open  
Return air motorised damper 2 Open  
Relief air motorised damper 3 Open

# Features

- PHSE 8-PHSE35 single stage
- PHE40-PHE200 two stage
- PHSE8-PHSE35 direct drive
- PHE40-PHE200 belt drive
- Automatic De-Ice
- Liquid accumulator
- Crankcase heater
- 24 volt control
- Galvanised steel panelling
- Durable powder coated cabinet (outdoor unit)
- External stainless steel fittings
- Easy access panels with turn lock handles, no screws
- 25mm insulation
- Coil corrosion protection
- High quality scroll compressors
- High/low pressure protection for compressor
- Time delay protection for compressor
- Limit start timer
- Quiet & efficient
- Individual defrost dual circuit units for two stage units
- Reverse phase protection
- Electric reheat high temperature protection (optional)
- Overload protection for both indoor and outdoor fan motor
- MEPS IV approved

- Manufactured for Australian Standards & Conditions
- High quality control procedures
- R410a refrigerant is used in our standard units.

Units with R407c refrigerant are available on request.

## Optional Features

As an active market player in the commercial air conditioning industry, we understand that every project is unique. Standard manufactured units may not meet the requirements of your system design.

Dunnair always welcome enquiries for special custom made air conditioning equipment.

Available options are listed below:

- **Split ducted** configuration also available
- Two stage available for 18-35kW units
- Fan upgrade (high external static pressure)
- Stainless steel drip tray
- Belt drive instead of direct drive fan
- All copper coils (copper fins)
- Stainless steel casing
- VSD on supply air fan
- Anti-corrosion marine grade black fin
- Hot gas bypass
- EC plug fan
- 2 speed condenser fan
- High static centrifugal condenser fan for plant room
- Stainless steel casing
- Other Customised options available,

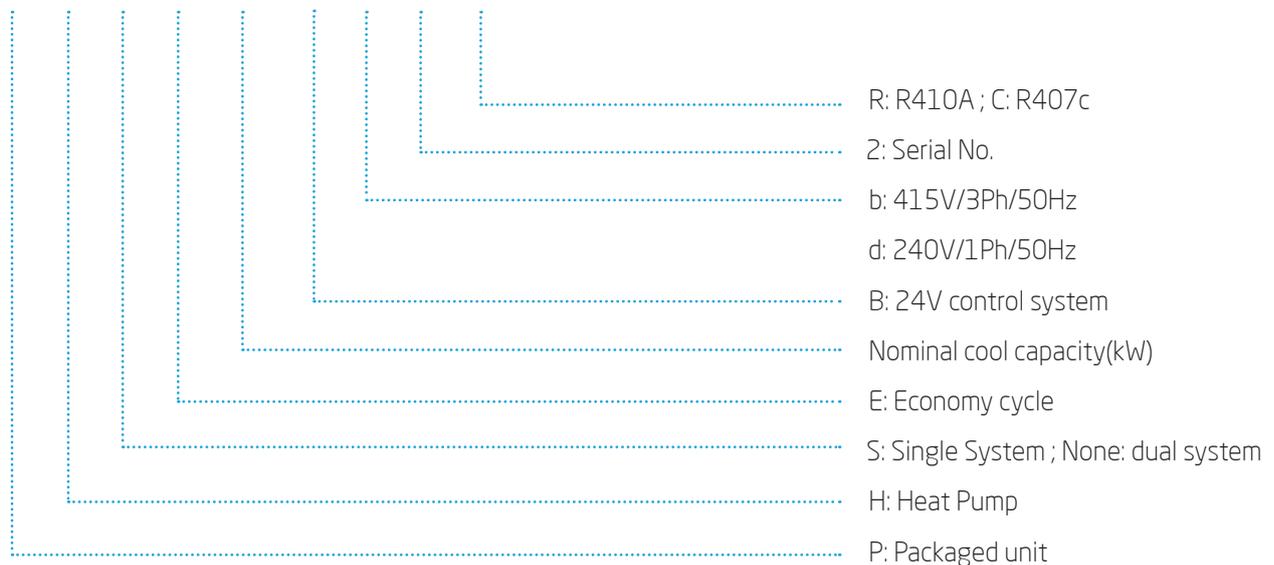

please contact with your local Dunnair Sale office

# PHSE8-PHE200

## DUCTED PACKAGED ROOFTOP AIR CONDITIONERS

### Nomenclature

P H S E 25 - B b 2 - R

### Applications

These units have been specifically developed for air conditioning in commercial premises, e.g. shopping malls, offices, banks, factories and restaurants.

### Refrigeration System

All PHE units are factory charged with R410A refrigerant.

### Compressor

Our high efficiency scroll type compressor is hermetically sealed, quiet running and supported on rubber mounts to minimise vibration.

### Safety Features

1. High and low pressure protection
2. Indoor and outdoor fan overload protection
3. Compressor delay timer
4. Circuit breakers
5. Time and temperature controlled electronic de-ice switch prevents icing up of the outdoor coil during heating cycle
6. Integrated fault run terminal
7. Crankcase heaters

# Optional Controller Features

- Up to 4 stage compressor control.
- Integrated communications (Modbus & BACnet).
- Integrated Economy function.
- 365 day, 7 day or manual operation.
- Security PIN protected menus.
- Smart 2 wire sensors with multiple functions.
- Averaging
- After Hours run function
- Force system Off
- Force ventilation (fan only) mode

- Optional RF & communicating sensors available.
- 2 programmable auxiliary inputs.
- 0-10V heating & cooling valve control.
- Occupancy Inputs with individual set point control.
- 24V or 240V AC powered.
- Volt free relay outputs - 240V 10A max.

## Specifications

|                           |       |   |
|---------------------------|-------|---|
| Input Voltage             | ----- | 24/240 VAC+ / -15%. 50/60 Htz   |
| Operating Temperature     | ----- | 0-50C (32 to 122F)  |
| Operating RH              | ----- | 0-95% (non condensing)  |
| Storage Temperature       | ----- | 0-65C (32 to 150F)  |
| Size                      | ----- | 110 x 110 x 65mm<br>110 x 110 x 65mm with terminal covers fitted  |
| Control range             | ----- | 0-50C   |
| Maximum Equipment Stages  | ----- | 4 compressors (HC made = 2 heat 3 cool)   |
| Anti-cycle timer          | ----- | Off, 2,3,4 or 5 minutes (installer adjustable)  |
| After hours timer         | ----- | Off to 12 hours (installer adjustable)  |
| Memory type               | ----- | Non volatile 128k   |
